

TECHNICAL INFO SHEET

Storage Conditions for Activated Carbon

The correct storage conditions are very important so that our activated carbon products retain all of their positive properties and functions that are necessary for their use. In addition, the original Donau Carbon packaging must not be damaged.

Storage conditions:

- Storage in closed packaging of Donau Carbon GmbH.
- Protection against rain and groundwater.
- The storage room must be dry, odorless and have a maximum humidity of 60%.
- Protection against UV radiation.
- The storage temperature must be between 0°C - 40°C.
- Do not store together with solvents or odorous products.

Further information can be found in the respective safety data sheet.

Shelf life:

Virgin activated carbon can be stored for at least two years if the storage conditions described above are observed.
